The invention relates to a nove isolated increased and the proposition has antinfilammatory, antiatheritic, antirheumatic, immunosuppressive, osteopathic, antidabatic, dermatological, antipportatic, antidalergic, antiasthmatic, hepatotropic, and respiratory activity. A polymuclectide of the invention may have a use in gene therapy. The PRO polypeptide, its agonist, antagonist, or antibody that specifically binds to the polypeptide is useful for treating an immune related disorder such as systemic lupus erythematosus, rheumatoid arthritis, osteoarthritis, a spondyloarthropathy, systemic sclerosis, an idiopathic inflammatory myopathy, Sjogram's syndrome, systemic sclerosis, antidopathic inflammatory myopathy, Sjogram's syndrome, trombocytopenia, thyroiditis, diabetes mellitus, immune-mediated area in disease, a demyelinating polyneuropathy, Guillain-Barre syndrome, a chronic inflammatory demyelinating polyneuropathy, Guillain-Barre syndrome, a chronic inflammatory demyelinating polyneuropathy, Guillainy crimpses, and inflammatory demyelinating polyneuropathy, Guillainy chimary disease, infectious or autoimmune chronic active hepatitis, primary disease, infectious or autoimmune chronic active hepatitis, primary clinflammatory bowel disease, contact dermatitis, solerosing chlamatory bowel disease, contact dermatitis, postiasis, an allergic clisease, asthma, allergic rhinitis, attendiated skin disease, a bullous skin disease, asthma, allergic rhinitis, attendiated skin disease, bullous contact dermatitis, contact dermatitis, food chromonia, idiopathic pneumonia, idiopathic pulmonary fibrosis, hypersensitivity, urricaria, an immunologic disease, graft rejection or graft-versus-host disease. The present sequence represents a PRO protein or contact disease, graft rejection or cortact dermatical sequence represents a PRO protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            142 MASVINSTCINVILITCSVEKEEKAVITYNMSPLGEEGINVLOIFOTPEDOELTYICTAONPVSN 201

                                                                                                                                                                                                                                                                                                                                                         23-MAY-1997
                                                                                                                                                                                                                                                                                                                                                                                                                               23-MAY-1997
                                                                                                                                                                                                                                                                                                                                                                                                                                           23-MAY-1997
                                                                                                                                                                                                                                                                                                                                                                                                                                                       23-MAY-1997
     acid molecule designated Gene 164 from the human cDNA clone HSAWF26 (deposited as clone ATCC 97903 and ATCC 209049). The gene can be used to generate fusion proteins by linking to the gene to a human immunoglobulin Fc portion (e.g. AAVS9502) for increasing the stability of the fused protein as compared to the human protein only. The invention relates to 186 novel genes and their fragments (mucleic acid sequences: AAV59511-V59812; amino acid sequences AAM731-W73026) which are useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. Also, pathological conditions can be diagnosed by determining the amount of the new polypeptides in a sample or by determining the presence of mutations in the new polymucleotides. Specific uses are described for each of the 186 polymucleotides, based on which tissues they are most highly expressed in (see AAVS9511 for

The invention relates to an isolated protein that is one of 186 human secreted proteins, given in the specification, encoded by one of 309 cDNA sequences also given in the specification, encoded by one of 309 cDNA sequences also given in the specification. The protein is used in a condition in e.g. humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep. Disorders which are diagnosed or treated include autoimmune diseases e.g. rheumatoid arthritis, hyperpolificative disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cardiac arrest, particular disorders e.g. corneal infection. The polypeptides e.g. and coular disorders e.g. corneal infection. The polypeptides can also be used to aid wound the healing and epithelial cell proliferation, to prevent skin aging due to subburn, to maintain organs before transplantation, for supporting cell culture of primary tissues, to regenerate tissues and in chemotrais. The polypeptides can also be used as a food additive or preservative to carbohydrate, vitamins, minerals, cofactors and other nutritional components. The printed specification, but was obtained in electronic format disparal, from memory at contact.
                                                                                                                                                                                                                                                                                                                                                                                                                 Ruben SM, Rosen CA, Fischer CL, Soppet DP, Carter KC;

The present invention relates to the isolation of novel human secreted proteins and the polynucleotide sequences encoding them. The invention also discloses vectors, host cells, antibodies, and recombinant methods for producing human secreted proteins. The polypeptide and polynucleotide sequences for the secreted proteins are useful for preventing, treating, andiotaxing or disgoorders less in the secreted proteins are useful for preventing, treating, conclusions and polymorleotide sequences for the secreted proteins are useful for preventing, treating, conclusions in munucledifications, wounds, reproductive disorders, blood-related disorders (e.g. haemophilia or thrombootycopaenia), immunodefactionies (e.g. hashophilia or thrombootycopaenia), immunodefactions (e.g. graft-versus-host disease, thymic hypoplasia), autoimmune disorders (e.g. graft-versus-host disease, wital or bacterial or thugal infections (e.g. AIDS or sepsia), renal disorders (e.g. kidney failure), cardiovascular disorders (e.g. asthma), infections (e.g. AIDS or sepsia), respiratory disorders (e.g. kidney failure), cardiovascular disorders (e.g. angina pectoris, carebral ischemia or congenital heart defects), respiratory continuodeotide or polypoptide may also be used as vaccine adjuvants. ABO34374-ABO34815 represent human secreted proteins or their fragments. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the cuspic secured proteins or their fragments.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New genes and its encoded prostate cancer antigen proteins, useful for preventing, treating, ameliorating or diagnosing e.g. prostate cancers, thymic hypoplasia, multiple sclerosis, AIDS, angina pectoris or cerebral ischemia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Ruben SM, Rosen CA, Soppet DR, Carter KC, Bednarik DP;

                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention describes an isolated nucleic acid comprising a sequence having 95 % identity with: a polynucleotide fragment of a sequence not given in the specification, or its allelic variant; a polynucleotide fragment of the CDNA sequence; a polynucleotide sequence encoding a polypucleotide, or its fragment, domain, epitope or species homologue; or a polynucleotide that hybridises under stringent conditions to any one of the sequences of (a)-(c). The nucleic acid is useful for preparing a medicament for diagnosing, preventing, treating or amelicating as medical condition e.g., cancer. The is the amino acid sequence of a novel human secreted protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             61 YERIHALGPNYNLVISDLRMEDAGDYKADINTQADPYTTTKRYNLQIYRRLGKPKITQSL 120

The invention relates to isolated nucleic acid molecules and the human secreted proteins (SPs) they encode. The proteins and nucleic acids may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate SP expression e.g. cancer, haematopoietic disorders, endocrine disorders, diseases of the immune system, inflammatory disorders and many others. Pull details of disorders that may be prevented, diagnosed and/or treated by the above methods are given in the specification. The nucleic acid molecules may be used to produce their proteins. The nucleic acid and it's complementary sequences may also be used as DNA probes in diagnostic assays to detect and quantitate the presence of similar nucleic acids in samples, and therefore which patients may be in need of restorative therapy. The SPs may also be used as antigens in the production of antibodies against the proteins and in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Isolated nucleic acid molecules encoding human secreted proteins, useful for preventing, diagnosing and treating disorders associated with

                                                                                                                                                                                                                                                                                                                                                                    assays to identify modulators of SP expression and activity. The anti-SP antibodies and antagonists may also be used to down regulate expression and activity. The anti-SP antibodies may also be used as diagnostic agents for detecting the presence the proteins in samples (e.g. by enzyme linked immunosorbant assay (ELISA)). The present sequence represents the amino acid sequence of a human secreted protein.

                                                                                                                                                                                                                                                                                                                                  The invention relates to a novel isolated polypeptide (NOVX) comprising a mature form of any of the 37 amino acid sequence fully defined in the generic form of any of the 37 amino acid sequence fully defined in the appetification. A polypeptide of the invention has antidiabetic, anorectic, cardiant, hypotensive, antiateriosclerotic, ancientification, antidonoulsant, obsteopathic, neuroprotective, antipatexhianory, dermatological, antiasthematic, and antibodies are useful in the manufacture of a medicament for triasthematic, and antibodies are useful in the manufacture of a medicament for triating asyndrome associated with a human disease, perferably a NOVA-associated disorder. The nucleic acid molecules, polypeptides and antibodies are useful for treating, preventing or disaponeing diseases such as metabolic disorders, clabeles, perventing or disaponeing diseases und antibodies are useful for treating, preventing or disaponeing diseases such as metabolic disorders, clabeles, perventing or disaponeing diseases und antibodies are useful for treating, preventing or disaponeing diseases und antibodies are useful for clabeles, polypeptides and antibodies are useful for creating, preventing or disaponeing diseases und antibodies are dispease, peripepy, immune disorders, inclementation, and protoxoal), ancoraxia, cancer, cardigovascular diseases (hypertension, atherosclerosis), neurodegenerative disorders (osteoarthritis), heamatopoletic disorders, inflammatory skin disorders, costeoarthritis), heamatopoletic disorders, inflammatory skin disorders, in generation, haematopoletic disorders, inflammatory skin disorders, and particular disorders and antipolate are further used as hybridisation probes, in chromosome mapping, preventive medicine show homology to estimath factor receptor of regers in Novia-1c show homology to fibroblast growth factor-21 proteins; Novia-2 shows homology to alphabetic and part are propered by an antipolation of the invention show homology to certain knows homology to marix metalloproceanases; 
                                                                                                                                                                                                                                 New isolated NOVX polypeptides and polynucleotides, useful for preventing, diagnosing or treating NOVX-associated disorders, e.g. osteoarthritis, obesity, atherosclerosis, cancer, Parkinson's disease, asthma, or infections.
                                                                                                                                                                              Rieger DK;
                                                                                                                                                                              Padigaru M,
                                                                                                                                                                                                                                                                                                               Example 5; SEQ ID NO 188; 214pp; English.
                                                                                                                                                                              Ort T,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to a novel isolated polypeptide (NOVX) comprising mature form of any of the 37 amino acid sequences fully defined in the specification. A polypeptide of the invention has antidiabetic, anorectic, cardiant, hypotensive, antiarteriosclerotic, anorectic, virucide, antibacterial, fungicide, protozoacide, nootropic,
antiarteriosclerotic; anorectic; virucide; antibacterial; fungicide; protozoacide; nootropic; neuroprotective; antibacterial; fungicide; protozoacide; nootropic; neuroprotective; antiparkinsonian; anticonvulsant; osteopathic; antiarthritic; antiniflammatory; fibroblast; growth factor receptor 4; FGRR4; complement factor I precursor; matrix metalloproteinase-15 precursor; fibroblast growth factor receptor 4; FGRR4; fibroblast growth factor-21; FGF-21; antialpha-2 macroglobulin-1ike polypeptide variant; alpha-2 macroglobulin-1ike polypeptide variant; antileukoproteinase 1 precursor; LIV-1; nuclear hormone receptor NOR-1; transmembrane protein-like; beta-neoendorphin-dynorphin precursor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New isolated NOVX polypeptides and polynucleotides, useful for preventing, diagnosing or treating NOVX-associated disorders, e.g. osteoarthritis, obesity, atherosclerosis, cancer, Parkinson's disease, asthma, or infections.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Ort T, Padigaru M, Rieger DK;

```
redroprocective, antinflammatory, antinflammatory, antiatchmatic, antinflammatory, antinflammatory, antiatchmatic, antinflammatory, antinflammatory, antinflammatory, antinflammatory, antinflammatory, antinflammatory, antinflammatory, antinflammatory, antilogueant for treating a syndrome are useful in the manufacture of a medicament for treating a syndrome associated with a human disease, preferably a NOVX-associated disorder. The nucleic acid molecules, polypeptides and antibodies are useful for treating, preventing or diagnosing diseases such as metabolic disorders, diabetes, obesity, infectious diseases (viral, bacterial, fungal, and protozoal), anorexia, cancer, cardiovascular diseases (hypertension, atherosclerosis), neurodegenerative disorders, Alzheimer's disease, Parkinson's disease, epilepsy: immune disorders, Alzheimer's consecutrbritis), hasmatopoietic disorders, inflammatory skin disorders, asthma, and various dyslipidaemias. The nucleic acids and polypeptides or antibolise for the identification of small molecules therapy, in generation of antibodies that bind immunospecifically to Nova substances for use in therapeutic or diagnostic methods. The nucleic acids are further used as hybridisation probes, in chromosome mapping, trissue typing, preventive medicine, and pharmacogenomics. The NovX polypeptides of the invention show homology to certain known human croposities by the mology to fibroblast growth factor receptor (FGFR4); NOV2a shows homology to gibroblast growth factor: 1 precursor; NOV3a shows homology to alpha-2 macroglobulin-like contingent conting
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 precursor; NOV9-91 show homology to LIV-1 protein; NOV10a shows homology to nuclear hormone receptor NOR-1; NOV11a-11] show homology to transmembrane protein-like; NOV12a-12c show homology to beta-necendorphin precursor. The present sequence represents a NOVX polypeptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 60 YYERIHALGPNYNLVISDLRMEDAGDYKADINTQADPYTTTKRYNLQIYRRLGKPKIT-Q 118
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              63 YLGRLDITKMSYSLCISNLTLNDAGSYKAQINQRNFEVTTEEFTLFVYEQLQEPQVTMK 122

```
The present invention relates to new immunoglobulin superfamily proteins (IGSFP). The polypeptides, polynucleotides, agonists and antagonists are useful for diagnosing, treating or preventing disorders associated with aberrant expression of IGSFP, particularly cell proliferative, e.g. arteriosclerosis, atherosclerosis, cirrhosis, hepatitis, paroxysmal cocturnal haemoglobinuria, polycythaemia vera, psoriasis, primary thrombocytopenia or cancers including leukaemia, lymphoma, sarcoma or myeloma, and autoimmune or inflammatory disorders, e.g. acquired myeloma, and autoimmune or inflammatory disorders, e.g. acquired thyroiditis, contact dermatitis, Chan's disease, diabetes mellitus, thyroiditis, contact dermatitis, gondrome, gout, Graves' disease, clanamico's thyroiditis, irritable bowel syndrome, multiple sclerosis, osteoarthritis, osteoporosis, pancreatitis, trauma, or viral, bacterial, arbitis, siggen's syndrome, uveitis, trauma, or viral, bacterial, fungal, parasitic, protozoal or helminthic infections. They are also useful in the assessment of the effects of exogenous compounds on the expression of nucleic acid and amino acid sequences of IGSFP. The present compounds on the anino acid sequence represents a human IGSFP protein of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           5
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         60 YYERIHALGPNYNLVISDLRMEDAGDYKADINTQADPYTTTKRYNLQIYRRLGKPKIT-Q 118

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to a novel isolated immune response associated protein (IRAP) comprising any of 15 fully defined sequences given in the specification. The polypeptide of the invention demonstrates antiarteriosclerotic, cytostatic, neuroprotective, antiparkinsonian, hepatotropic, cerebroprotective, antiinflammatory, nootropic and vasotropic activities and may be useful for treating a disease or condition associated with decreased expression or overexpression of functional immune response associated proteins, while the antibody is useful for diseases of condition or disease associated with the expensesion of likap, such as arteriosclerosis, cirrhosis, cancer, stroke, Alzheimer's disease, Parkinson's disease and Crohn's disease. Furthermore, the molecules of the invention may be utilised during gene therapy procedures. The current sequence is that of a human IRAP protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New isolated immune response associated proteins (IRAP) polypeptide and polymucleotide, useful for diagnosing and/or treating disorders with aberrant expression of IRAP, such as arteriosclerosis, cirrhosis, cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Ramkumar J, Swarnakar A, Elliott VS, Hafalia AJA, Richardson TW;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                              1 KDSEIFTVNGILGESVTFPV.......NNSDSISARQLCADIAMGFR 199

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 6, Application US/08462738

Patent No. 5977303

GENERAL INFORMATION:
APPLICANT: Chang, Chia-Chun J.
APPLICANT: Cocks, Benjamin G.
APPLICANT: Cocks, Benjamin G.
APPLICANT: Cocks, Dan E.
TITLE OF INVENTION: PURIFIED GENES ENCODING MAMMALIAN CELL
TITLE OF INVENTION: SURFACE ANTIGENS; PROTEINS AND ANTIBODIES
NUMBER OF SEQUENCES: 12
CORRESPONDENCE ADDRESS:
                                                                                                                                               PURIFIED GENES ENCODING MAMMALIAN CELL SURFACE ANTIGENS; PROTEINS AND ANTIBODIES
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match 15.4%; Score 160; DB 1; Length 305; Best Local Similarity 25.4%; Pred. No. 1.4e-08; Matches 50; Conservative 35; Mismatches 78; Indels

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                R. Beauchemin, N.; Turbide, C.; Afar, D.; Bell, J.; Raymond, M.; Stanners, C.P.; Fuke, Cancer Res. 49, 2017-2021, 1989
A.77itle: A mouse analogue of the human carcinoembryonic antigen.
A.77itle: A mouse analogue of the human carcinoembryonic antigen.
A.77itle: A mouse analogue of the human carcinoembryonic antigen.
A.77itle: A mouse analogue of the human carcinoembryonic antigen.
A.77itle: S. 18625
A.77itle: A mouse analogue of the human carcinoembryonic antigen.
A.77itle: A mouse analogue of the human carcinoembryonic antigen.
A.77itle: A mouse analogue of the human carcinoembryonic antigen.
A.77itle: A mouse analogue of the human carcinoembryonic antigen.
A.77itle: A mouse analogue of the human carcinoembryonic antigen.
A.77itle: A mouse analogue of the human carcinoembryonic antigen.
A.77itle: A mouse analogue of the human carcinoembryonic antigen.
A.77itle: A mouse analogue of the human carcinoembryonic antigen.
A.77itle: A mouse analogue of the human carcinoembryonic antigen.
A.77itle: A mouse analogue of the human carcinoembryonic antigen.
A.77itle: A mouse analogue of the human carcinoembryonic antigen.
A.77itle: A mouse analogue of the human carcinoembryonic antigen.
A.77itle: A mouse analogue of the human carcinoembryonic antigen.
A.77itle: A mouse analogue of the human carcinoembryonic antigen.
A.77itle: A mouse analogue of the human carcinoembryonic antigen.
A.77itle: A mouse analogue of the human carcinoembryonic antigen.
A.77itle: A mouse analogue of the human carcinoembryonic antigen.
A.77itle: A mouse analogue of the human carcinoembryonic antigen.
A.77itle: A mouse analogue of the human carcinoembryonic antigen.
A.77itle: A mouse analogue of the human carcinoembryonic antigen.
A.77itle: A mouse analogue of the human carcinoembryonic antigen.
A.77itle: A mouse analogue of the human carcinoembryonic antigen.
A.77itle: A mouse analogue of the human carcinoembryonic antigen.
A.77itle: A mouse and A mouse 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     59 PLALGAFAWYKGNTTAI----DKEIARFVPNSNMNFTGQAYSGREIIYSNGSLLFQMITM 114
